

Bridging the gap between community water challenges & investment in water infrastructure for future generations

The New England Environmental Finance Center (NEEFC) has worked with New England communities for more than two decades to build local capacity to pay for the growing cost of protecting critical environmental resources and fostering resilient communities.

The New England Water Infrastructure Network (NEWIN) helps communities access funding for **drinking water, wastewater, stormwater, and nonpoint source pollution needs** through the Clean Water and Drinking Water State Revolving Funds (SRFs) and other sources.

NEWIN offers **FREE financial, managerial, and technical support** for the region's **municipalities, water utilities, and tribes**. We prioritize working with capacity-constrained communities, those with pressing water quality challenges, and water systems that have not previously applied for SRF funding.

A network of partners with diverse expertise & regional experience

working with newin

Flexible funding to meet local water needs

Clean Water and Drinking Water State Revolving Funds offer low-interest loans (and principal forgiveness for eligible borrowers) for a wide range of community water infrastructure needs and NEWIN can help you get there.

Water Infrastructure

Stormwater/
Nonpoint Source

Source Water Protection

Climate Resiliency

Lead Service Lines

PFAS/ Emerging Contaminants

Customized water infrastructure solutions

We are a network of planners, project managers, engineers, water utility advisors, educators, finance experts, and applied researchers.

NEWIN works to **bring communities to the point of applying for and securing funding for project implementation**, with assistance at every step of the process.

Partnerships & Engagement

- Community outreach
- Water system partnerships
- Capacity building & training
- Decision-maker & board education

Planning & Assessment

- Asset management
- Environmental reviews
- Climate resilience planning
- Workforce planning

Project Development

- Project design
- Identify/apply for pre-development funds for preliminary engineering
- Lead service line inventories

Funding & Financing

- Rates & revenue analyses
- Financial planning
- Identify funding options
- Application support

Project Management

- Bid support
- Change order review
- Project inspection
- Domestic preference & Davis Bacon assistance
